## Working Group for XXL products

---

The trans-regional co-operation network for the sector

---

## The working group – the co-operation network for the industry

---

The Working Group for XXL products (AK XXL) was founded by the IPH – Institut für Integrierte Produktion Hannover gGmbH in 2010 as a trans-regional co-operation network. Among others, it is directed at manufacturers and suppliers of aeroplanes, special vehicles, conveyor systems, ships and wind energy plants.

Interested companies can communicate with one another about their current technological or organisational issues and develop solutions together with other members.

The aim of the working group is closer co-operation between manufacturers and suppliers of XXL products and research organisations.

The network enables access to the knowledge that drives the sector and provides space for contacts and co-operations with strong partners.

Through the latest results from research, the AK XXL supports members to meet their future challenges. This co-operation strengthens the innovative force of the companies and ensures that they will be competitive long-term.

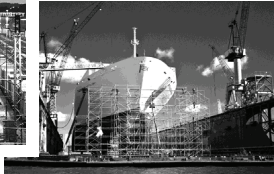

---

## Benefits for practice

---

For manufacturers and suppliers of XXL products, the Working Group offers

- a forum for the exchange of experience
- a discussion platform for current issues
- access to the latest scientific findings
- space for co-operations

---

## Be there

---

The Working Group meetings take place twice a year, either at the IPH or at one of the member companies. You can find the current issues and dates of the meetings as well as information on the activities of the IPH in the field of XXL products at [www.xxl-produkte.net](http://www.xxl-produkte.net).

To get to know the Working Group, you can take part in an event once free of charge. For further membership, a membership contribution is charged.
